

Senior Full Stack .NET Developer Technical Assessment

Sponsorship Request Approval Workflow

Submission Deadline: 4 Days

Estimated Assessment Duration: 6 hours

Stack: .NET 8 / .NET 10 (Preferred) + React / Angular / Vue / Blazor

Database: MySQL / PostgreSQL

Hosting requirement: Candidate must provide a live testing URL

Assessment Objective

Build a simplified Sponsorship Request Form with an approval workflow.

This assessment evaluates whether the candidate can:

- build a workflow-based enterprise module,
- implement approval logic,
- handle role-based access,
- integrate frontend and backend,
- design clean backend APIs,
- and explain architecture decisions clearly.

Business Scenario

A company receives sponsorship requests from internal staff.

Each request must go through an approval process before it is approved or rejected.

The system should allow:

- request submission,
- manager approval,
- finance/admin review,
- status tracking,
- and audit history.

User Roles

Role	Responsibility
Requestor	Submit sponsorship request
Manager	Review and approve/reject request

Finance Admin	Final review and approval
System Admin	View all requests and manage basic settings

Required Workflow

The sponsorship request should follow this flow:

Status	Description
Draft	Request created but not submitted
Pending Manager Approval	Submitted and waiting for manager
Pending Finance Review	Manager approved, waiting for finance
Approved	Fully approved
Rejected	Rejected by manager or finance
Cancelled	Cancelled by requestor before approval

Sponsorship Request Form Fields

Candidate should implement the following fields:

Basic Information

- Request Title
- Requestor Name
- Department
- Sponsorship Type
- Event / Organisation Name
- Event Date
- Requested Amount
- Purpose / Justification

Optional Fields

- Supporting Document Upload
- Expected Business Benefit
- Remarks

Document upload can be optional if time is limited.

Functional Requirements

1. Login & Role Access

System must support login for:

- Requestor
- Manager

- Finance Admin
- System Admin

Each role should see different actions.

2. Requestor Functions

Requestor can:

- create sponsorship request,
- save as draft,
- submit request,
- view own requests,
- cancel request if not yet approved.

3. Manager Functions

Manager can:

- view pending manager approvals,
- approve request,
- reject request,
- add approval remarks.

If approved, request moves to Pending Finance Review.

4. Finance Admin Functions

Finance Admin can:

- view requests pending finance review,
- approve final sponsorship request,
- reject request,
- add finance remarks.

If approved, request moves to Approved.

5. System Admin Functions

System Admin can:

- view all requests,
- view workflow history,
- manage sponsorship types.

Mandatory Deliverables

Candidate must submit:

1. Git Repository

Must include:

- source code,
- proper commits,
- README.

2. Working Application

Must include:

- backend API,
- frontend UI,
- database setup.

3. Setup Guide

- README should explain:
- how to run backend,
- how to run frontend,
- how to set up database,
- test login accounts.

4. Architecture Explanation

Candidate must briefly explain:

- backend architecture,
- frontend structure,
- workflow logic,
- RBAC logic,
- database design,
- assumptions/tradeoffs.

5. Hosting Requirement

The application must be deployed to a live test environment so we can test it directly through the browser.

- Frontend testing URL
- Backend API URL
- Swagger / API documentation URL
- Test login accounts
- Git repository link
- Deployment notes

Important Note to Candidate

This is not expected to be a full production system.

We are assessing:

- how you structure the solution,
- how you think,
- how you communicate,
- how you manage tradeoffs,
- and how you design workflow-based enterprise software.

If you require more time for the assessment, please kindly email to us for time extension with reason. Our team will decide on a case by case basis.
